

Running water - naturally

As you can see from nature, running water is always fresh. It doesn't freeze in winter and expire in summer. AkvaSolina solutions for water treatment are based on these natural and chemical free principles.

AkvaSolina aeration equipments

Aeration of well water

The AkvaSolina aeration solution is based on recycling of well water and oxidation of water in the well. Aeration increases the oxygen content and simultaneously releases gases such as radon and hydrogen sulphide. ORP value increases too. Any separate pumps or tanks are not required in case of the well is used as a clean water reservoir and the water recycling is handled by a pump in the well.

Easy to install

The aeration cycle can be assembled in a several different ways using the ready-made installation kits. The ways will be chosen in cooperation with the customer to determine the most appropriate installation solution for the site. In the picture, the aeration circuit has been installed in the house pipe. For more information concerning aeration alternatives, please contact.
